

Who else makes AI molecules you can actually make?

Competitive landscape for SyntheMol in small-molecule generative chemistry: 26 competitors and substitutes, their funding, how they price, and where SyntheMol sits.

SyntheMol = purchasable building blocks (~30B-molecule space in 2024, ~46B in 2026) + known reactions + activity model → molecule and its synthesis recipe

Bottom line

- 1 **"Synthesizable by design" is no longer unique.** Iktos, PostEra, Onepot, Chemify and XtalPi all sell it, and several academic models (SynFormer, RxnFlow, SynFlowNet, ReaSyn) use the same building-block-plus-reaction idea. SyntheMol's own code is public. The pitch has to move from the method to the proof.
- 2 **SyntheMol's proof is strong for its size.** Two peer-reviewed rounds with wet-lab hits: 6 novel *A. baumannii* actives from 58 made (2024), then 13 potent from 79 made with 7 novel and in vivo MRSA efficacy for synthecin (2026). Few direct competitors publish hit rates plus animal data for generated molecules.
- 3 **Money is in programs, not software.** Insilico sold only \$4.9M of software in 2025 against \$56M total revenue. Schrödinger (\$199.5M software) is the exception after 30 years. Platform deals pay \$12–115M upfront, usually 2–5% of the headline value.
- 4 **Capital gap is extreme.** Stoked closed a \$2.5M seed. Isomorphic has ~\$2.7B, Lila \$550M, Genesis \$400M+. SyntheMol cannot win as a horizontal platform. It can win a niche.
- 5 **Model access is being given away.** NVIDIA GenMol, Boltz-2 (MIT licence), REINVENT 4 and Lilly TuneLab are free. Tamarind hosts 200+ models without code. Charging for "access to a model" will be hard.
- 6 **The best-defended position is biology-first, low-data, anti-infective design.** The only focused rival is Phare Bio, a grant-funded non-profit. Stokes-lab phenotypic data plus validated in vivo hits is the moat to argue (hand-off to Sithum, WP-H).

Positioning map

Horizontal: how tightly each player ties designs to a real synthesis route. Vertical: whether it earns money selling tools or owning drug programs. Bubble size tracks capital raised (log scale). Scores are our judgement calls from public information.

● SyntheMol (client) ● Direct ● Well-funded AI designer ● Incumbent software ● Indirect / complementor ● Emerging / open ● Niche: AI antibiotics

Reading it: SyntheMol's current spot (synthesis-first and owning its programs) is shared mainly with PostEra. The big pipeline companies sit to the left, with weaker synthesis grounding. The bottom-right is crowded with make-on-demand suppliers, retrosynthesis tools and free synthesizable models. If Stoked licenses SyntheMol as a platform, it moves down toward Iktos, Chemify and Onepot with far less capital, so a licence play needs a partner such as Enamine, Chemspace or Tamarind for reach.

Capital raised, US\$M (log scale)

Private rounds or IPO raise. Public companies with no single figure are left out.

Where SyntheMol can win

- Every molecule ships with a recipe from purchasable blocks, so a chemist can order it right away (~3-4 weeks, >80% success at Enamine).
- Works with small, phenotypic datasets (whole-cell growth inhibition), where structure-based tools like Isomorphic's or Boltz have no target structure to use.
- Published, repeated wet-lab and in vivo validation in antibiotics, an area big AI players avoid.
- Multi-objective RL (activity + solubility) in the 2026 version.

Where it is exposed

- Public code plus a crowded academic field make the algorithm easy to copy.
- Depends on Enamine's space. Onepot and Chemify own their "make" step.
- Chemistry limited to a fixed set of reactions (13 in the 2024 paper), so scaffolds are less diverse than free-form generators.
- Antibiotic market economics are weak, so buyers are few and pay little.

Competitor database

COMPANY	TIER	APPROACH	BUSINESS MODEL	FUNDING	DEALS / EVIDENCE	THREAT	WHY IT MATTERS
Stoked Bio — SyntheMol / SyntheMol-RL Hamilton, ON (McMaster spin-out)	Client	Assembles molecules from commercial building blocks + known reactions (Enamine REAL, ~30B then ~46B space); every output ships with its synthesis recipe. RL version does multi-objective optimisation (activity + solubility). SyntheMol (MCTS, Nat Mach Intell 2024); SyntheMol-RL (RL, Mol Syst Biol 2026)	Internal pipeline (anti-infectives, microbiome, GBM, Parkinson's); commercial model under evaluation	\$2.5M seed (announced 1 May 2026; angel-led with insiders, oversubscribed, 99% from Ontario; currency not stated, likely CAD)	Exclusive McMaster licence for Enterololin (Crohn's), Feb 2026 v1: 58 made, 6 potent novel A. baumannii actives. RL: 79 made, 13 potent, 7 structurally novel; synthecin effective in MRSA mouse wound model	—	Baseline for comparison. source

COMPANY	TIER	APPROACH	BUSINESS MODEL	FUNDING	DEALS / EVIDENCE	THREAT	WHY IT MATTERS
 Iktos Paris, France	Direct	Generative design constrained to synthetically accessible chemistry, retrosynthesis to purchasable materials, and AI-orchestrated robotic synthesis (Chemspeed partnership, Mar 2026). Makya (generative design), Spaya (retrosynthesis), Iktos Robotics	SaaS licences + partnered discovery + robotics	€15.5M Series A (M Ventures, Debiopharm, Omnes); €2.5M EIC Accelerator grant 2025 (+€5M follow-on eligible)	Servier €18+ multi-target (Jan 2026); Pierre Fabre oncology; Ono; Elsevier (Reaxys retrosynthesis) Pharma partnerships; no own clinical asset disclosed	High	Closest commercial analogue: sells both the generative tool and the synthesis route, and now closes the make loop with robots. source
 PostEra United States	Direct	Synthesis-aware generative chemistry; ML retrosynthesis; origin in COVID Moonshot open-science programme. Proton platform; Manifold (synthesis-aware search/design)	Partnered 'AI Lab' deals + internal programs (small molecules, ADC payloads)	\$24M Series A (Jan 2022, Clermont Group). Also co-leads the NIH-funded ASAP antiviral consortium (\$68M initial funding, shared with MSKCC and DNDI)	Pfizer AI Lab: \$13M upfront, up to \$260M (Jan 2022); expanded Jan 2025 with a further \$12M upfront Partnered programs; antiviral work via NIH AVIDD	High	Same pitch (AI molecules chemists can actually make) and a proven pharma buyer in Pfizer. source
 Onepot AI United States	Direct	Enumerated make-on-demand space tied to its own automated synthesis lab; claims molecules delivered 6-10x faster. onepot CORE (3.4B enumerated space), POT-1 automated lab, 'Phil' AI chemist	Sells molecules / synthesis-as-a-service to discovery teams	\$13M pre-seed + seed (Nov 2025; Fifty Years lead, Khosla, Speedinvest, Norrsken)	Early commercial partners (undisclosed) Commercial deliveries claimed; no public biology validation	High	Owens the 'make' step that SyntheMol outsources to Enamine; a generative front-end on CORE would replicate SyntheMol's value proposition. source
 Chemify Glasgow, UK	Direct	Digitised, programmable chemistry: design is coupled to robotic synthesis in its own facilities. Chemputation platform, Chemifarm automated facilities, Chemify Genesis	Partnered discovery for pharma, specialty chemicals, materials	>\$50M Series B (Oct 2025; Wing VC, Insight); £22M grants 2026; ~£110M total	Pharma and materials partners (undisclosed) First Chemifarm live 2025; larger site due late 2026	Medium	Well-funded 'design + make' player; horizontal (not drug-specific) so less direct. source
 Insilico Medicine (Chemistry42) Boston / Hong Kong (HKEX: 3696)	Direct	Ensemble of generative models with synthetic-accessibility scoring and filters; strongest clinical proof of any generative-chemistry company. Pharma.AI: Chemistry42 (generative chemistry), Biology42, Medicine42	Pipeline + out-licensing dominate; software is a small line	HK IPO 30 Dec 2025, ~HK\$2.28B raised (largest HK biotech IPO of 2025)	Lilly: \$115M upfront, up to \$2.75B (Mar 2026); SK Biopharm up to \$2.5B; ~\$10B aggregate headline value Rentosertib (TNIK, IPF): Phase 3 launched Jul 2026, first patient dosed 9 Sep 2026. FY2025 revenue \$56.2M, of which software only \$4.9M; net loss \$352M	Medium	Sets buyer expectations for generative chemistry and publishes list pricing (~\$3K/month entry, third-party estimate). Its software revenue shows how small a pure tool business is. source
 XtalPI Shenzhen / Boston (HKEX: 2228)	Direct	Physics + AI design with large robotic synthesis/testing labs. AI + robotics discovery platform, 200+ domain models	Drug discovery services + partnerships	Public (HKEX); first profitable year 2025	DoveTree up to ~\$5.9B (\$51M upfront + \$49M near-term); 17 of top-20 pharma engaged 2025 revenue RMB 803M (+201%); net profit RMB 124M	Medium	Proof that AI + automated synthesis can be profitable at scale; big-pharma incumbent vendor. source
 Variational AI (Enki) Vancouver, BC	Direct	Generative foundation model for hit/lead design; synthesizability handled as a design objective. Enki foundation model for small-molecule design	Platform access for biopharma chemistry teams	\$3.5M seed (2021) + \$5.5M seed extension (Feb 2025; Nimbus Synergies lead, Merck GHIF)	Undisclosed pharma users Early commercial	Medium	Only Canadian pure-play generative-chemistry startup; competes for the same Canadian investors and grants. source
 Model Medicines (GALILEO) La Jolla, CA	Direct	Generative expansion of chemical space (claims 50 trillion-compound solution space); anti-infective focus (antivirals). GALILEO generative platform	Internal pipeline	Not disclosed in sources found	— Claims 12/12 one-shot antiviral hits (preprint, Jan 2025); MDL-001 broad-spectrum antiviral	Medium	Same therapeutic neighbourhood (infectious disease) with a generative 'one-shot' story. source
 Isomorphic Labs London, UK (Alphabet)	Well-funded AI designer	Structure-first AI design across modalities. IsoDDE drug design engine (AlphaFold lineage)	Internal pipeline + pharma partnerships	\$600M (2025) + \$2.1B Series B (May 2026, Thrive lead) ≈ \$2.7B	Lilly ~\$45M upfront / \$1.7B; Novartis ~\$37.5M / \$1.2B (expanded 2025); J&J First candidates targeted for clinic by end-2026	Low	Doesn't sell tools; competes for pharma partnership budgets and talent, and resets investor expectations. source
 Iambic Therapeutics San Diego, CA	Well-funded AI designer	AI + automated chemistry; NVIDIA-backed. NeuralPLexer (structure), Enchant (property prediction), generative design	Clinical-stage oncology pipeline + partnerships	>\$100M (Nov 2025) + \$20M (Jan 2026); filed for \$100M Nasdaq IPO (IAM), Sep 2026	Takeda: up to \$1.7B in milestones, 3 targets (Feb 2026); Lundbeck (migraine, 2024) Phase 1 oncology assets	Low	Comparable for 'AI platform to clinic' valuation; not a tool competitor. source
 Genesis Molecular AI Burlingame, CA	Well-funded AI designer	Generative + predictive AI with physics; moving toward platform licensing. GEMS platform; Pearl structure model	Platform deals + pipeline	\$200M Series B (2023); >\$400M total	Incyte expansion (May 2026): \$80M cash + \$40M equity, up to \$232M milestones per program, 5+ targets; Gilead (2024) Preclinical	Low	Shows pharma will pay nine-figure upfronts for platform access plus data rights. source
 Terray Therapeutics Monrovia, CA	Well-funded AI designer	Generative design trained on its own ultra-high-throughput binding data (5B+ measurements). tNova platform	Internal immunology pipeline + partnerships	\$120M Series B (Oct 2024; Bedford Ridge, NVentures); >\$200M total	BMS, Calico, Gilead Preclinical → clinic	Low	Model for a 'proprietary data moat' story, which is also Stoked's likely moat argument. source
 Recursion (incl. Exscientia, Cyclica, Valence) Salt Lake City, UT (Nasdaq: RXRX)	Well-funded AI designer	Phenomics + generative chemistry acquired via Exscientia (2024) and Valence Labs. Recursion OS; Exscientia design; Boltz-2 co-developer	Pipeline + partnerships	Public; cut 20% of staff 2025; burn <\$390M guided for 2026	Bought Cyclica (Toronto, \$40M) and Valence (Montréal, \$47.5M) in 2023 Pipeline pruned 2025	Low	Cyclica/Valence are the relevant Canadian exit comps for a generative-chemistry spin-out. source
 Aqemia Paris, France	Well-funded AI designer	Generates designs scored by physics, so it needs little experimental training data. Generative AI + quantum/statistical physics scoring	Pipeline + pharma partnership	€60M Series A (Wendel, Bpifrance, Eurazeo)	Sanofi up to \$140M (Dec 2023; expanded Jul 2026) Preclinical	Low	Low-data pitch overlaps with SyntheMol's low-data antibiotic story. source

COMPANY	TIER	APPROACH	BUSINESS MODEL	FUNDING	DEALS / EVIDENCE	THREAT	WHY IT MATTERS
● Schrödinger New York, NY (Nasdaq: SDGR)	Incumbent software	Physics-based scoring (FEP+) plus reaction-based enumeration and AI design. LiveDesign, AutoDesigner, FEP+; de novo design workflows	Software licences (ACV) + collaborative/internal pipeline	Public; FY2025 revenue \$255.9M, software \$199.5M (+10.6%)	Many pharma site licences Established standard in pharma comp-chem	Medium	The default budget line a SyntheMol licence would have to displace. Prices are quote-only (not published). Overlaps with Jonathan's comp-chem slide. source
● Enamine REAL / Chemspace Kyiv, Ukraine / Riga	Indirect / complementor	Enumerated space where every compound is made on demand, 3-4 weeks, >80% success. REAL Space (94.5B make-on-demand); xREAL (trillions) via Chemspace	Sells compounds and building blocks	Private	Exclusive BioSolveIT partnership (Dec 2023) Industry-standard supplier	Complementor	SyntheMol's chemical space and supplier. A partner, but also a dependency: Enamine or a partner could add generative search itself. source
● BioSolveIT (infiniSee) Sankt Augustin, Germany	Indirect / complementor	Searches billions of REAL compounds by similarity/pharmacophore in minutes. infiniSee chemical-space navigation, SeeSAR	Software licences	Private	Exclusive Enamine collaboration Widely used	Medium	A buyer can get 'synthesizable hits' by searching REAL instead of generating, so this is a substitute for simple use cases. source
● Retrosynthesis tools (SYNTHIA, Spaya, Molecule.one) Various	Indirect / complementor	Post-hoc route planning for any designed molecule (SYNTHIA: 12M+ starting materials, 115K+ reaction rules). SYNTHIA (Merck KGaA/MilliporeSigma), Spaya (Iktos), Molecule.one	SaaS, organisational pricing	Molecule.one won \$1M Standard Industries challenge (Dec 2025)	Molecule.one-CAS; SYNTHIA-Dotmatics Luma Mature	Medium	Lets any generative tool bolt on synthesizability after the fact, weakening 'synthesizable by construction' as a sole differentiator. source
● Open-source synthesizable generators (SynFormer, RxnFlow, SynFlowNet, ReaSyn) Academic (MIT, KAIST, Cambridge, etc.)	Emerging / open	Build molecules from building blocks and reaction templates, the same basic idea as SyntheMol, using transformers, diffusion or GFlowNets; the field grew rapidly from mid-2024. Research code	Free	Academic grants	— Benchmark papers; limited wet-lab validation	High	The core idea is now common in academic work, much of it with public code. SyntheMol's own code is also public on GitHub/PyPI. source
● NVIDIA BioNeMo (GenMol NIM) Santa Clara, CA	Emerging / open	Fragment-based generation (SAFE), lead optimisation, scaffold hopping. GenMol v2 masked-diffusion generator as a hosted NIM microservice	Free/cheap model access to drive GPU demand	—	NVentures invests across the field (Terry, Genesis, Iambic, Lila) ICML 2025	Medium	Pushes the price of generic generative models toward zero. source
● AstraZeneca REINVENT 4 Gothenburg, Sweden	Emerging / open	RL-tuned generation; synthesizability via add-on scoring only. Open-source RL SMILES generator	Free (Apache-2.0)	—	— Widely used in pharma	Medium	Default free baseline inside pharma; buyers will ask 'why not REINVENT?' source
● Boltz PBC (Boltz-2) London, UK	Emerging / open	Near-FEP affinity estimates ~1,000x faster; usable as the scoring oracle for any generator. Boltz-2 structure + affinity model (MIT licence)	Open models + enterprise services	\$28M seed (Jan 2026; a16z, Zetta, Amplify)	Pfizer collaboration (Jan 2026) Open benchmarks	Low	Complement more than competitor: a free scoring model SyntheMol could plug in for target-based programs. source
● Lilly TuneLab Indianapolis, IN	Emerging / open	Property prediction, not generation. 18 ADMET/property models trained on >\$1B of Lilly data, federated learning	Free to selected biotechs (Lilly gets model updates)	—	Circle Pharma, insitro among early users Launched Sep 2025	Low	Pharma is giving away models to capture data and deal flow, which lowers what start-ups can charge for predictions. source
● Tamarind Bio San Francisco, CA	Emerging / open	Runs open models (possibly including SyntheMol-type tools) without GPUs or code. No-code hosting of 200+ protein and molecule models	SaaS	\$13.6M Series A (Feb 2026; Dimension, YC)	~100 orgs incl. 8 of top-20 pharma —	Medium	A distribution channel or a commoditiser: could host open SyntheMol and capture the user relationship. source
● Lila Sciences Cambridge, MA (Flagship)	Emerging / open	AI + robotic labs running closed-loop experiments across chemistry and life sciences. Autonomous 'AI science factories' discovery slide): Chai Discovery (\$400M Series C, Jul 2026), Converge Bio, Earendil Labs.	Platform + partnerships	\$550M total incl. \$350M Series A; reported talks at \$8.5B valuation	NVIDIA backing Early	Low	Longer-term threat: closed-loop design-make-test at a scale no small player can match. source
● Phare Bio + Collins Lab (MIT/Wyss) Boston, MA (non-profit)	Niche: AI antibiotics	Generative design of new antibiotic classes; building the first open-source AI antibiotic database. Generative AI antibiotic platform (TARGET project)	Non-profit pipeline, pharma partnering (e.g. Basilea)	Up to \$27M ARPA-H; TED Audacious; Google.org	Basilea Generative antibiotics vs MRSA and N. gonorrhoeae (2025)	High	Same therapeutic niche, same academic lineage (Stokes trained in the Collins lab), and grant-funded, so it can give data and models away. source

Pricing and deal benchmarks

Stoked said pricing matters. These are the public reference points for a generative chemistry offering.

ITEM	FIGURE	SOURCE	CONFIDENCE
Schrödinger licence	Quote-only; not published. One third-party site estimates ~\$10K per seat per year	Third-party estimate (IntuitionLabs); Schrödinger site shows no prices	Unverified
Insilico Pharma.AI / Chemistry42	Monthly or yearly plans (yearly 16% off); SaaS, on-prem, or 'discovery sprints'. One third-party site says from ~\$3K per month	Insilico site (plans); third-party (price)	Price unverified
Insilico software revenue	\$4.9M in FY2025 (9% of \$56.2M revenue)	FY2025 results	Reported
Schrödinger software revenue	\$199.5M in FY2025; software ACV \$198M	FY2025 results	Reported
Enamine REAL compound	3–4 weeks, >80% success (Enamine). Cost: one forum estimate of ~\$400–700 per compound including basic assays	Enamine / BioSolveIT; PostEra forum post	Cost unverified
Pharma platform deal upfront	\$12M–\$115M upfront; typically 2–5% of headline value	Isomorphic, Insilico, XtalPi, PostEra, Genesis deals	Reported
Free alternatives	REINVENT 4, SynFormer/RxnFlow, NVIDIA GenMol, Boltz-2, Lilly TuneLab: \$0 for model access	Public	Reported

PLATFORM DEAL	YEAR	UPFRONT	HEADLINE	UPFRONT SHARE	NOTES
Insilico → Lilly	2026	\$115M	\$2,750M	4.2%	Generative small molecules
XtalPi → DoveTree	2025	\$51M	\$5,890M	0.9%	AI + robotics, multi-TA
Isomorphic → Lilly	2024	\$45M	\$1,700M	2.6%	Small molecules
Isomorphic → Novartis	2024	\$37.5M	\$1,200M	3.1%	Small molecules
Genesis → Incyte (expansion)	2026	\$80M	\$1,160M	6.9%	Plus \$40M equity; headline = up to \$232M/program × 5 targets
PostEra → Pfizer	2022	\$13M	\$260M	5.0%	AI Lab; expanded Jan 2025 with \$12M more upfront
Iktos → Servier	2026	–	\$1,080M	–	€1B+ (≈\$1.08B); upfront undisclosed
Iambic → Takeda	2026	–	\$1,700M	–	Milestones only; upfront undisclosed
Aqemia → Sanofi	2023	–	\$140M	–	Upfront undisclosed

Slide 14 draft: generative chemistry

Four points to say in the teleconference.

COMPETITIVE INTELLIGENCE · GENERATIVE CHEMISTRY · DHRUV

Synthesizability is now table stakes. Validated biology is the edge.

- **Direct rivals:** Iktos (Servier €1B+ deal, 2026), PostEra (Pfizer AI Lab), Onepot (3.4B-molecule space + own lab), Chemify, Insilico Chemistry42, XtalPi.
- **Capital gap:** Stoked \$2.5M seed vs Isomorphic ~\$2.7B, Genesis \$400M+, Chemify ~\$145M.
- **Pricing signal:** software alone earns little (Insilico: \$4.9M of \$56M); value is in partnered programs with \$12–115M upfronts.
- **SyntheMol's angle:** recipe-included designs, low-data phenotypic models, and in vivo antibiotic proof (synthecin vs MRSA). Nearest niche rival: Phare Bio (non-profit, \$27M ARPA-H).

Open questions for Stoked

1. Who owns SyntheMol IP? The first paper came out of Stanford (Swanson, Zou) with McMaster (Stokes). Does Stoked hold an exclusive licence, and what licence covers the public GitHub code?
2. Is SyntheMol-RL (2026) code public too, and is there an unreleased internal version?
3. Which proprietary datasets (phenotypic screens, in vivo results) come with SyntheMol if it is spun out or licensed?
4. Does Stoked have a relationship with Enamine or Chemspace (supply terms, co-marketing)?
5. Target buyer: pharma anti-infective groups, AMR-focused biotechs, or non-profits and funders (CARB-X, ARPA-H, Wellcome)?

Still unverified: Schrödinger and Chemistry42 prices (third-party estimates only), Enamine per-compound cost (one forum estimate), Model Medicines funding (not found). Map positions and threat ratings are our own judgement.
